Art Unit: 2871

DETAILED ACTION

Priority

1. This application appears to be a division of Application No. 08/981,654, filed

01/08/1998. A later application for a distinct or independent invention, carved out of a pending

application and disclosing and claiming only subject matter disclosed in an earlier or parent

application is known as a divisional application or "division." The divisional application should

set forth only that portion of the earlier disclosure which is germane to the invention as claimed

in the divisional application.

Specification

2. The lengthy specification has not been checked to the extent necessary to determine the

presence of all possible minor errors. Applicant's cooperation is requested in correcting any

errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Application/Control Number: 09/887,092

Art Unit: 2871

4. Claims 4-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for

Page 3

failing to particularly point out and distinctly claim the subject matter which applicant regards as

the invention.

Claims 4, 8-9, 13-14 and 18 claims both an apparatus and the method steps of using the

apparatus is indefinite. See In Ex parte Lyell, 17 USPQ2d 1548.

5. Claims 4-18 are also rejected under 35 U.S.C. 101 because the claims are directed to

neither a "process" nor a "device," but rather embraces or overlaps two different statutory classes

of invention set forth in 35 U.S.C 101 which is drafted so as to set forth the statutory classes of

invention in the alternative only. Id. at 1551.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the

basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 4-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Amstutz et al.,

US Patent No. 4,634,229.

The above claim is anticipated by Amstutz et al., figure 1 which show a liquid crystal

display (LCD) apparatus having:

Application/Control Number: 09/887,092 Page 4

Art Unit: 2871

• A pair of transparent substrates (1, 2), each having parallel strips of electrode layers (6, 7);

- A super twist nematic liquid crystal (5) is sandwiched between the pair of substrates (1,
 2), wherein the total twisted angle (φ) of liquid crystal molecules is between 180° and 360°;
- A pair of polarizes (10, 11) is disposed to the outside of the pair of substrates (1, 2), wherein the polarizers having absorption axes which are inherently orthogonal to each other and the absorption axes inherently being angled 45° respect to a direction of the orientation of liquid crystal molecules in an intermediate portion in a direction of thickness of the liquid crystal layer (i.e., $\phi = 180^{\circ}$, $\beta = 45^{\circ}$, $\gamma = 45^{\circ}$);

It should be noted that the recitation "a method of driving the liquid crystal shutter" is not germane to the issue of patentability of the device itself. Therefore, this limitation of the method of driving has not been given patentable weight.

Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 9-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Amstutz et al., US Patent No. 4,634,229.

Application/Control Number: 09/887,092

Art Unit: 2871

Regarding claims 9-18, Amstutz et al. do not disclose the value of $\Delta n.d$ that lies within a

Page 5

range of 600 to 900nm. However, Amstutz et al. do disclose the range of 800 to 1200nm for the

Δn.d (claim 6). Therefore, such disclosed range in Amstutz et al. makes possible the claimed

range of 600 to 900nm and overlapping ranges are at least obvious. *In re Malagari*, 499 Fed.2d

1297, 182 USPQ 549 CCPA 1974.

It should also be noted that, as noted above, the limitation of method of driving has not

been given patentable weight.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Examiner Dung Nguyen whose telephone number is (703) 305-0423. The

fax phone number for this Group is (703) 308-7722.

Any information of a general nature or relating to the status of this application should be

directed to the group receptionist whose telephone number is (703) 308-0956.
